Mar 8, 2016

There are uncountable invents in the world; now, the clip introduced 10 science fiction like future technologies that were soon going to enter our daily lives for real, including mind meld, smart fridge as well as space elevator.

In several movies, we can see considerable fancy technologies. For instances, in Harry Potter, Potter got a magic cloak that made invisibility possible; in The Island, cloning of human organs was operated in order to continue human's lives.

We usually assumed that the unbelievable phenomenon in the films did not really exist; however, the clip gave us some information which indicated those incredible stuff might enter our daily lives in realistic world either in near future or in distant future.
