If you are moving to The Red Planet, Mars, there are several things you need to prepare. First, you may need an ability to tolerate low temperature, loneliness, as well as a great amount of radiation. Next, you probably need sufficient breathable air, food, and water. Third, you definitely need a suitable place to live.

There used to be an ocean on the northern hemisphere of Mars, and hot and dry environment on the southern part; however in contemporary era, there is just a giant dusty desert with a considerable kind of features, such as dune and tar. Hence, it is possible that you met dust storms, which play an important role in making the planet red by scattering rusted iron particles into the atmosphere, on Mars.

Considering all the conditions, you might desire some place to build your house, inclusive of a space beside ocean, on the volcano, or beside the canyon. So what are you waiting for, just make the move to Mars now without hesitation.
